*Hardboard Range 2018*

# Vortex 14

How do you improve upon a truly classic design which has won many a race and won the hearts of many.

For 2018 we made the decision to marginally raise the side walls of the Vortex and to drop the deck just a little to make it even more manageable and drier, to make a great board, even better in being able to take on a slightly wider range of conditions.

# mistrat®

The Vortex . . . the game changer.  
Stability 3 Speed 5 Agility 3

**VORTEX** 14' x 23.30" x 8.5" x 304L x 11.5kg  
**VORTEX** 14' x 26" x 9.3" x 339L x 11kg

Note the 23.30 is considerably lower in volume than the 24 and 26" wide models, due to less overall thickness in the nose area.

Art Number: 180.120.140 Vortex 14' x 23.3"

Art Number: 180.121.140 Vortex 14' x 26"

# Vortex XL

The larger version of the regular Vortex, the Vortex XL provides added volume for the paddler of 80kg and above ensuring choppy waters can be handled with ease. Having the same great lines as the Vortex regular, the XL has proved itself in the toughest of races and is a pure joy to paddle. Dual drain holes keep the deck dry when the going gets rough.

The Vortex XL . . . that bit extra.  
Stability 3 Speed 5 Agility 4

**VORTEX XL** 14' x 24" x 9.3" x 332L x 11.9kg

Art Number: 180.122.140

# Vanquish 14' Surf Race

With ever growing preference for the 14' race board, we've had to ensure we have a design that ticks the boxes for improved beach break handling on the way out and way back in - and in addition ease of downwind performance and handling and turning. These performance requirements place a great range of expectations in a board of this nature.

We turned our focus to that of surf lifesaving and some of the prone boards used for rescue. We took out the elements we felt would serve the board's needs and the result is a board which has a novo-retro feel to it and takes even some elements from the old school windsurfing - no need to reinvent the wheel, simply take what is known and make the best use of these design elements.

- The nose area is full and duck-bill in profile to absorb impact and travel over rather than through on-coming waves with the intention of softening the impact of rougher water while permitting ease of water run off and ample buoyancy to prevent excess nose burying.
- Relatively long and straight parallel lines ensures excellent balance in terms of the boards spread of buoyancy, giving added directional control and improved downwind performance over a greater range of conditions. The wide squared tail area ensures that stepping back gives you plenty of standing area and control.
- Marginal scooped deck eliminates the need for scuppers and avoids swamping issues and improves speed of re-mounting in the case of a fall.
- Shallow concave for breaking surface tension and channelling water under pressure.

# Equinox 14

Attempting to improve a proven design is never easy, but in the case of the Equinox 14' we've addressed in particular the standing area.

We've lengthened the upper deck cowling to make for a smaller step down area, which further reduces the potential for swamping.

This has added additional buoyancy.

We also reduced the angle of the rear standing area to be flatter, for better footing.

All in all this improved the space in which the paddler stands in terms of sure-footedness so as the paddler can now get even more from this superb design.

The Equinox . . . the ocean sleigh.

Stability 3 Speed 5 Agility 4

**EQUINOX** 14' x 24.6" x 8.80" x 351L x 11.5kg

Art Number: 180.100.140 Equinox 14'

Foredeck has been extended further back to cover up dead space, reduced the potential for any swamping, increasing volume and improving the overall balance of the board.

# Stealth 17'6 Unlimited

The pinnacle of SUP sport, has to be the unparalleled performance that can be had from a board unrestricted by rules, permitting the design team to unleash their creativity. The Stealth is for the aficionado, the purest who appreciates the finer things in life and form and function personified, where there are no boundaries.

- Featuring the bow design of our super sleek and fast Vortex, we've held a semi-displaced form for as long as possible ensuring highly efficient water run off and lowered drag, followed by a flattening in the mid section, faring into a subtle vee and pin tail exit with marginally reversed angular finishing.
- A stand in area, lowers the paddlers centre of gravity and features x 2 sets of scuppers (drain holes) and our unique foot activated steering mechanism.
- Supplied with 7" race/weed carbon fin.

Stand by for some record breaking feats with this incredible masterpiece of design.

# Interceptor 17'6 Unlimited

The pinnacle of SUP sport has to be the unparalleled performance that can be had from a board unrestricted by rules, permitting the design team to unleash their creativity. The Interceptor is for the aficionado, the purest who appreciates the finer things in life and form and function personified, where there are no boundaries.

Since the inception of the sport, paddling downwind has been a primary driver of amongst many of the world's best paddlers - ocean paddling, chasing ocean wave and swell brings some of the most rewarding and memorable moments you can experience in catching wave after wave.

- To stand on top or within has been the subject of much debate and for the most part it comes down to personal preference. From perspective, we wanted to offer a clutter free space, that was free from issues of swamping, ease of re-mounting in the case of a fall and freedom to take advantage of the deck space.
- Our team riders voted this was their preferred option and while this view may be going a little against current trend, there's no question, the open decked design option remains a 'Classic' and while we're all about setting trends, we're also not always about following them either.
- A super smooth ride is offered in our Interceptor 17'6 with foot operated steering mechanism, with attention to maintaining a super fast semi displaced forward section to keep you moving in the slow sections and troughs, extending back into a stable underfoot paddling area and aft into the planning area. Soft forward rails prevent unwanted 'tracking' and 'tripping' gradually hardening up to give the bite you need to ride down the line.
